Local Authority chose the Cactus fuel monitoring system.

Leicestershire County Council (LCC) have decided that Liquid Management Solutions' Cactus fuel monitoring system is by far the best option for them as they take the next step in effective fuel management.

Six LCC depots will now use the **Cactus** system to manage their fuel; all sites will be linked via a telephone line, which will feed data back to one central computer. This gives them visibility of all the sites at HQ level, enabling them to manage their fuel from one central depot.

As the system is so versatile and can be set up in many different ways, an advisor from Liquid Management Solutions worked with the council extensively to ensure that the correct configuration was decided upon and that the most effective communication links were used.

"The Cactus system will revolutionise the fuel monitoring procedure at LCC and reduce the time it takes them to gain accurate data, investigate anomalies and carry out other previously time consuming tasks" said Basharat Ali, I T Director of Liquid Management Solutions.

Free Events:

**21/02/07
09.30 – 11.00
Safe And Fuel Efficient Driving
(SAFED)
Breakfast Seminar
Wolverhampton Science Park
Wolverhampton**

**14/03/07
18.00 – 20.00
Effective Fuel Management
Evening Seminar
Molineux Stadium

Fuel Saving Tip

Correct Vehicle Specification

6x2, 6x4, 4x2, low-roof, mid roof.....A modern vehicle comes in many guises. Purchasing a particular truck "because we've always gone with them" could cost your business dear if the correct choice isn't made.

Our Fuel & Fleet Efficiency experts are on hand to provide independent advice, ensuring that you choose the correct vehicle for the job.

Call us on 0845 450 7373 for more information.

Hanson Aggregates trial RFID bowser solution

Hanson Aggregates, one of the world's largest quarrying operations is trialling a unique Radio Frequency Identification (RFID) solution with Liquid Management Solutions (LMS), which will enable 100% accurate collection of fuel data in one of fuel monitoring's harshest environments; a quarry.

The system will not only identify fuel drawn from static tanks, but also fuel passed into mobile bowzers, and then into plant vehicles, whilst collecting 100% accurate odometer or engine hours readings.

The solution, on trial at a UK site, which remains strictly confidential, will mean that for the first time ever, quarries will be able to capture 100% accurate fuel data whilst eliminating the need for pen and paper or other human intervention.

"This is a major breakthrough for fuel monitoring and the quarrying industry. Until now it has been difficult for companies operating in these extremely harsh environments to procure robust equipment that will do the job and do it well. These are exciting times!" said Chris Rose of Liquid Management Solutions Ltd.

Special Offer

Stainless Steel Hose Reel

Only for use with diesel • Self Retracting
For use in Harsh or Clean Environments

£600 each + VAT

(rrp £630, free delivery)

Offer valid until 30/03/2007

*Should you require any independent advice on ways to reduce your fuel and fleet spend please contact one of our advisors on: **0845 450 7373**.*

*Alternatively please fax your details to: **0870 446 0054** or*
