

Cactus:

The 'Real-Time' solution

Europe's 2nd largest charitable organisation of its kind, West Midlands Special Needs Transport, has made a substantial investment decision to invest in the Cactus fuel management solution.

The Midlands based charity, which operates a fleet of 300 vehicles across 9 regional depots, decided that the project was a priority due to the lack of support and technical guidance from their previous fuel management provider.

Des Rogers, Operations Manager explained:

'The system was stand-alone at each site and could not be easily managed or monitored remotely. There was no facility for exporting data other than by printed reports.

We wanted a real-time, centrally managed solution.'

Key Features & Benefits:

- ***Fully networked using TCP/IP - 'Real-time' data transfer.***
- ***Data downloads to a central server - Fast and secure.***
- ***Visibility to whole network by Internet browser - Ideal for multi-depots.***
- ***Access restriction by password control - Completely secure.***

With electronic tank gauging also integrated into the back office software, visibility to 'live' tank stock positions is also available in real time, both at depot level and by remote access.
